## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims **1-16** are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

Referring to claims **1, 10, 11, and 12**, the prior art of record teaches an image processing apparatus/method/recording medium, comprising:

- a transmission apparatus for playing back image data and transmitting the image data through a predetermined transmission line;
- a reception apparatus for receiving image data transmitted thereto from a transmission apparatus through a predetermined transmission line;
- said transmission apparatus including a playback section for playing back image data in response to a request from said reception apparatus and a transmission section for transmitting the played back image data to said reception apparatus through said predetermined transmission line;
- a storage section having a storage capacity for a plurality of screens or more for storing the image data received by said reception section;
- a control section for issuing a request for image data of screens within a predetermined range forward and backward with reference to a noticed screen to said transmission apparatus, controlling an operation mode to be one of a normal speed mode, a high speed mode higher than the normal speed mode, or a pause mode, and controlling a display apparatus to display the image data stored in said storage

section, the predetermined range being set based on whether the operation mode is the normal speed mode, the high speed mode, or the pause mode, wherein the predetermined range is a first number of screens and image data at intervals within a first time period when the operation mode is the normal speed mode, the predetermined range is a second number of screens and image data at intervals of a second time period greater than the first time period when the operation mode is the high speed mode, and the predetermined range is a third number of screens and image data at intervals of a third time period when the operation mode is the pause mode; and

- a display apparatus for displaying the stored image data.

The prior art of record does not teach or fairly suggest a third number of screens, *greater than the first and second number of screens* ... when the operation mode is the pause mode. Thus, the claimed invention differs from the prior art in that a control section issues a request for a number of screens greater than the first and second number of screens, forward and backward with reference to a noticed screen when the operation mode is the pause mode.

Claims 2-9, 13-16 are allowed as being dependent on the allowable independent claims mentioned above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
